Application #: _____

WESTPORT™

SCHEDULE D: WATERWAY PROTECTION LINES

PROJECT ADDRESS: 8 Spriteview Ave Westport CT 06880

Due by 4:00 p.m. on _____

1. Explain/submit information showing why/how the proposed activity as located within Waterway Protection Lines will not cause flooding, drainage, erosion and/or related conditions hazardous to life and property and will not have an adverse impact upon the flood-carrying and water-storage capacity of the town’s waterways, including but not limited to the impact upon flood heights, hydrological energy flow, maintenance of essential and natural patterns of water circulation, drainage and basin configuration and maintenance of fresh- and saltwater exchange through the placement of culverts, tide gates or other drainage flood-control structures. (sec.148-8)

The entirety of the subject property is located within the WPLO & 100-year floodplain of Long Island Sound (AE-13.0). The proposed project will have no adverse impact to the LI Sound. The additional 30sf of impervious roof, required to cover the elevator shaft to meet ADA standards, will collect and discharge rainwater into a rain barrel or planting beds that are adjacent to the house. During construction site will be surrounded by silt fencing on all sides, except for the front. Existing gravel driveway will act as the anti-tracking area for construction vehicles. If any dewatering is required during excavation, the water will be discharged through a filter bag into the grass area in teh from of the house surrounded by hay bales.

2. Explain/submit information showing why/how the proposed activity as located within the Waterway Protection Lines will not cause water pollution, erosion and/or environmentally related hazards to life and property and will not have an adverse impact on the preservation of the natural resources and ecosystems of the waterway, including but not limited to impact on ground or surface water, aquifers, plant and aquatic life, nutrient exchange and supply, thermal energy flow, natural pollution filtration and decomposition, habitat diversity, viability and productivity and natural rates and processes or erosion and sedimentation. (sec. 148-9)
 cont'd.

No stockpile of materials will be required during construction. All trees are to remain during construction, no excavation would be conducted near trees, impacting their root system. Grass and vegetation will be restored at the completion of the project.

3. Other: _____
