Application #: _____

WESTPORT™

SCHEDULE C: WETLANDS / WATERCOURSES

PROJECT ADDRESS: 20 Fresenius Road (Lot C)

Due by 4:00 p.m. on _____

1. Pursuant to Section 9.6.2 relating to Soil Sample Data – the applicant/agent is to submit copy of a report by a “soil scientist” duly qualified in accordance with standards set by the U.S. Civil Service Commission, showing soil sample data, soil classifications, and a surveyed delineation of wetland soils as flagged by the scientist, including flag numbers (as requested by agency).
 - **Submitted previously as part of the approved subdivision**
2. Pursuant to Section 9.6.3 relating to Biological Evaluations – the applicant/agent is to submit a list and evaluation of the plant and animal life that may be found within, depend upon, or use the wetlands and watercourses (as requested by agency).
 - **Not Applicable**
3. Describe the anticipated impacts to wetlands and watercourses that may occur as the result of that portion of your proposal that may be located in wetlands, watercourses or their setbacks.
 - **Minimal impact to wetlands and watercourses is expected with the proposed construction. Double silt fences and a construction entrance is proposed to minimize the impact of work that is proposed to be within the 50 foot conservation setback line, which includes construction of a driveway previously approved as part of the subdivision application. There is no proposed direct impact to any wetlands or watercourses.**
4. Describe the mitigation that is being proposed as part of your application in order to minimize disturbance and pollution of wetlands and watercourses, maintain or improve water quality, and prevent destruction of or enhance the natural habitats and functions of the wetlands and watercourses.
 - **Double silt fence and a construction entrance are implemented to minimize the erosion from migrating from the construction area. Proposed storm water detention ponds have been installed and are proposed to handle the first inch of runoff as well as up to the 25 year storm. Detailed specifications and details have been included in the engineering to mitigate any potential issues to the regulated area and beyond.**
5. List the alternatives to the proposed application that were considered and the reason for their abandonment.
 - **Multiple iterations of the proposal have been considered, each with more direct impact. The submitted plans and proposal has been selected to reduce the potential impact to the area.**
